Macroeconomics Rudiger Dornbusch Stanley Fischer Richard

This edition aims to teach students how economics really works in the world. Its approach to modern macroeconomics reflects the shifts in monetary and fiscal policy in the UK, Europe and beyond. Professor at the Di Tella Institute in Buenos Aires, and a Member of Parliament in Argentina; Stanley Fischer is Vice President of Development Economics and Chief Economist at the World Bank. Rudiger Dornbusch is Ford International Professor.

The Macroeconomics of Populism in Latin America: The lessons of more than 200 years of economic development in Latin America demonstrate that the combination of populism and economic policies, which focus on addressing poverty and inequality, can lead to sustained economic growth and social welfare improvements. However, this success is not without its challenges, as Latin America has experienced several periods of economic instability, political turmoil, and social unrest. In this book, we provide an overview of the key economic policies and social programs implemented in the region, as well as an analysis of their impact on economic growth, poverty reduction, and inequality. This edition is updated to provide a comprehensive analysis of the recent financial crisis, its consequences, and possible policy responses, for developing countries in Latin America.

Instructor's Manual to Accompany Macroeconomics: Rudiger Dornbusch, Stanley Fischer

This edition retains the fundamental approach of the US one in terms of its focus on models and methodological frameworks for analysis, while increasing its Australasian perspective by including a focus on the open economy model, Australian economic policy, and the lessons of macroeconomic policy in the Asia-Pacific region. The only prerequisite continues to be principles of economics. The text is now even easier to teach from.
